> Butter and margarine go head to head

You see them next to each other in the grocery store, but which one do you choose? And, more importantly, which type of fat is better for your heart? The decision is in: Most margarine choices are a healthier option than butter, according to the Mayo Clinic.

Because margarine is made from vegetable oils, it doesn't contain dietary cholesterol and it's higher in polyunsaturated and monounsaturated, or "good," fats, which, when substituted for saturated fats, help reduce low-density lipoprotein (LDL), or "bad" cholesterol. On the other hand, butter contains high levels of saturated fat and cholesterol because it's made from animal fat.

Buyers beware, though: Choose your margarine carefully. Solid margarine—which comes in stick form—isn't a good choice because it contains trans fat. Instead, choose soft or liquid margarine and check labels for the spread with the lowest calories, the least amount of saturated fat and no trans fat.

> Long commutes take toll on the heart

Do you have a long ride to and from work? Well, here's another drawback to the aggravation you may feel being trapped in your car: According to a study in the *American Journal of Preventive Medicine*, which looked at almost 4,300 Texas city workers, the longer you're behind the wheel during your commute, the worse your heart health. Waistlines expanded, exercise routines disappeared, and with these bad habits came higher blood pressure and excess pounds.

Even for those who did exercise, these heart disease risk factors didn't disappear, which means there's probably something to the commute itself that's harming hearts. Researchers hypothesize it could be that long-distance drivers are burning fewer calories overall and stress could be taking a toll. Researchers suggest finding other ways to add activity to your day, so don't hesitate to bring a pair of walking shoes to work and hit the sidewalks during your lunch break.
