

Remove Toxins From All Products

Johnson & Johnson, the world's second-largest manufacturer of personal-care products like shampoo and moisturizers, announced it will remove chemicals associated with health risks from its products by 2016. The decision, which will affect brands like Aveeno and Neutrogena, is "a significant step toward reducing consumers' exposure to chemicals that could pose health risks," says Jason Rano, director of government affairs for the Environmental Working Group. Among the chemicals to go are parabens, phthalates, and formaldehyde-releasing preservatives, which have been linked to cancer, hormone disruption, and development problems in children. Rano hopes Johnson & Johnson's announcement will mark a turning point in the cosmetics
